

Why +AI could become the universal human
responsibility mark for a world made with machines.

Eric Maurant+AI

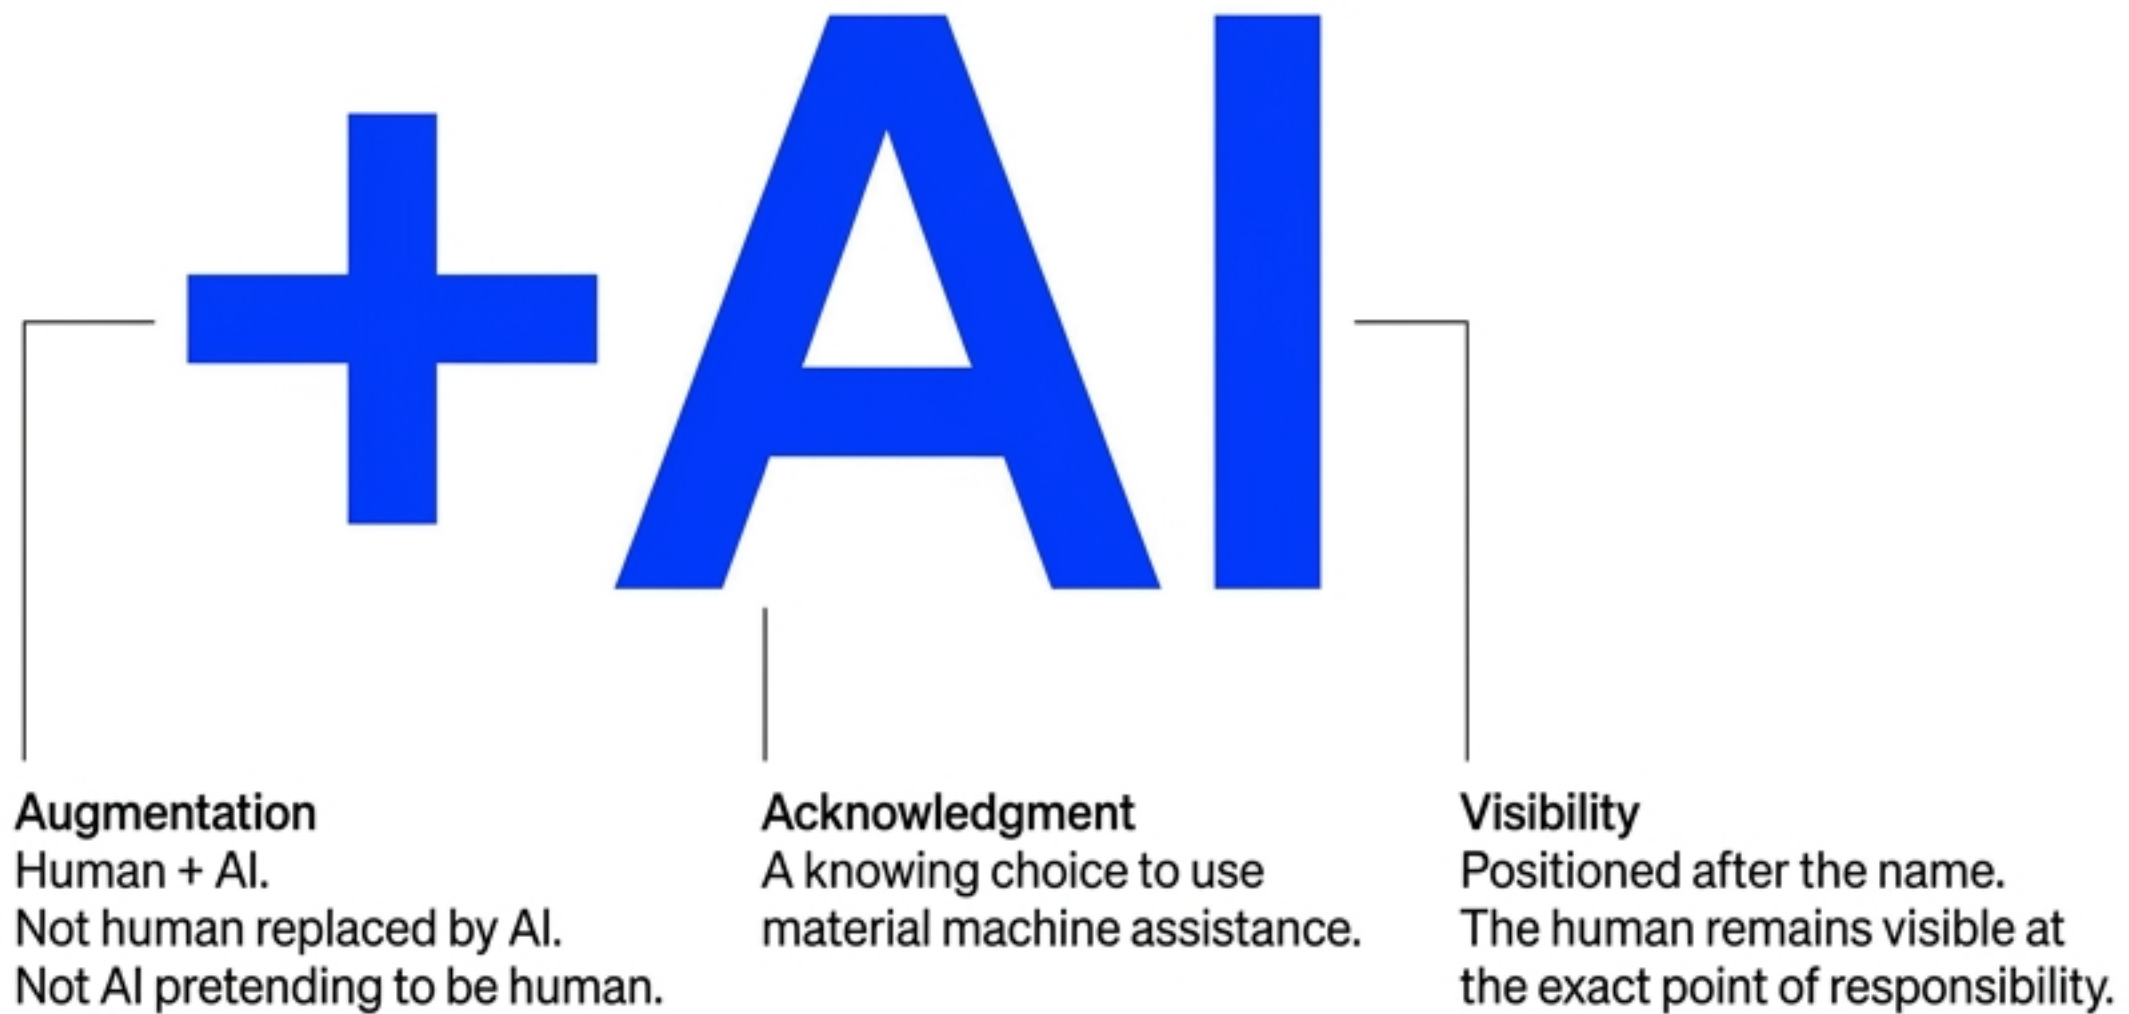

Author: Eric Maurant [+AI](#) | Contact: eric.maurant@japer.technology

The boundary between human and tool has dissolved.

The finished work is no longer easily described as human-made or AI-made. It is something created between them.

Three characters to claim responsibility,
not just acknowledge assistance.

AI helped. I take responsibility.

Accountability matters more than algorithmic disclosure.

The Old Question (Disclosure)

- Which model was used?
- How much was generated?
- Which sentences are machine?

Result: Leads to confusion, arbitrary math, and the metaphysical impossibility of separating human from machine.

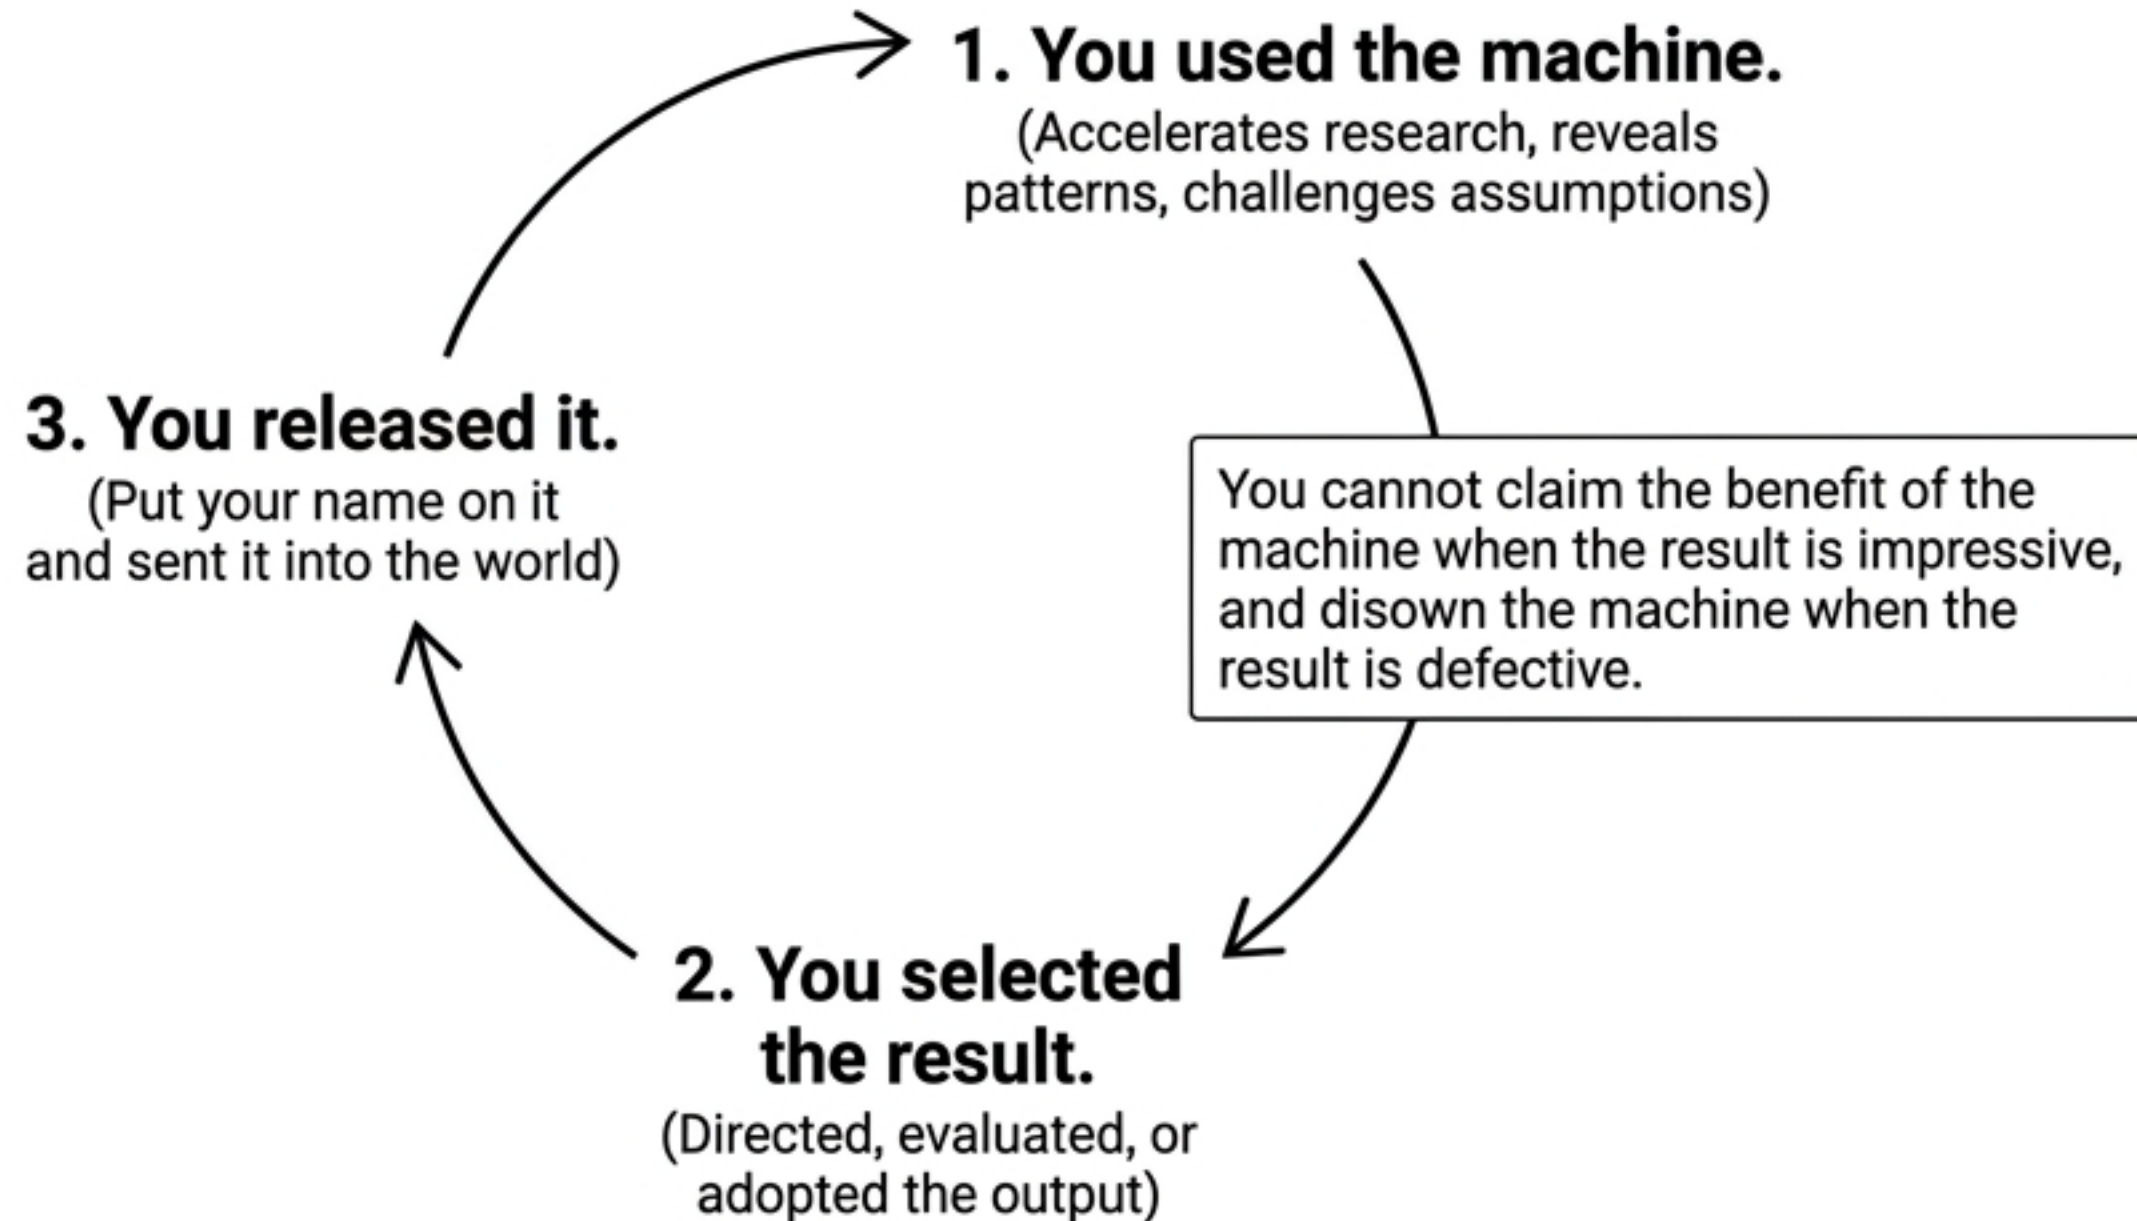

The New Question (Responsibility)

- Who chose to send this?
- Who accepted the recommendation?
- Who deployed the code?

Result: Leads to clear accountability and a defined point of human ownership.

We must stop asking how it was made, and start asking who stands behind it.

Augmentation without abdication.

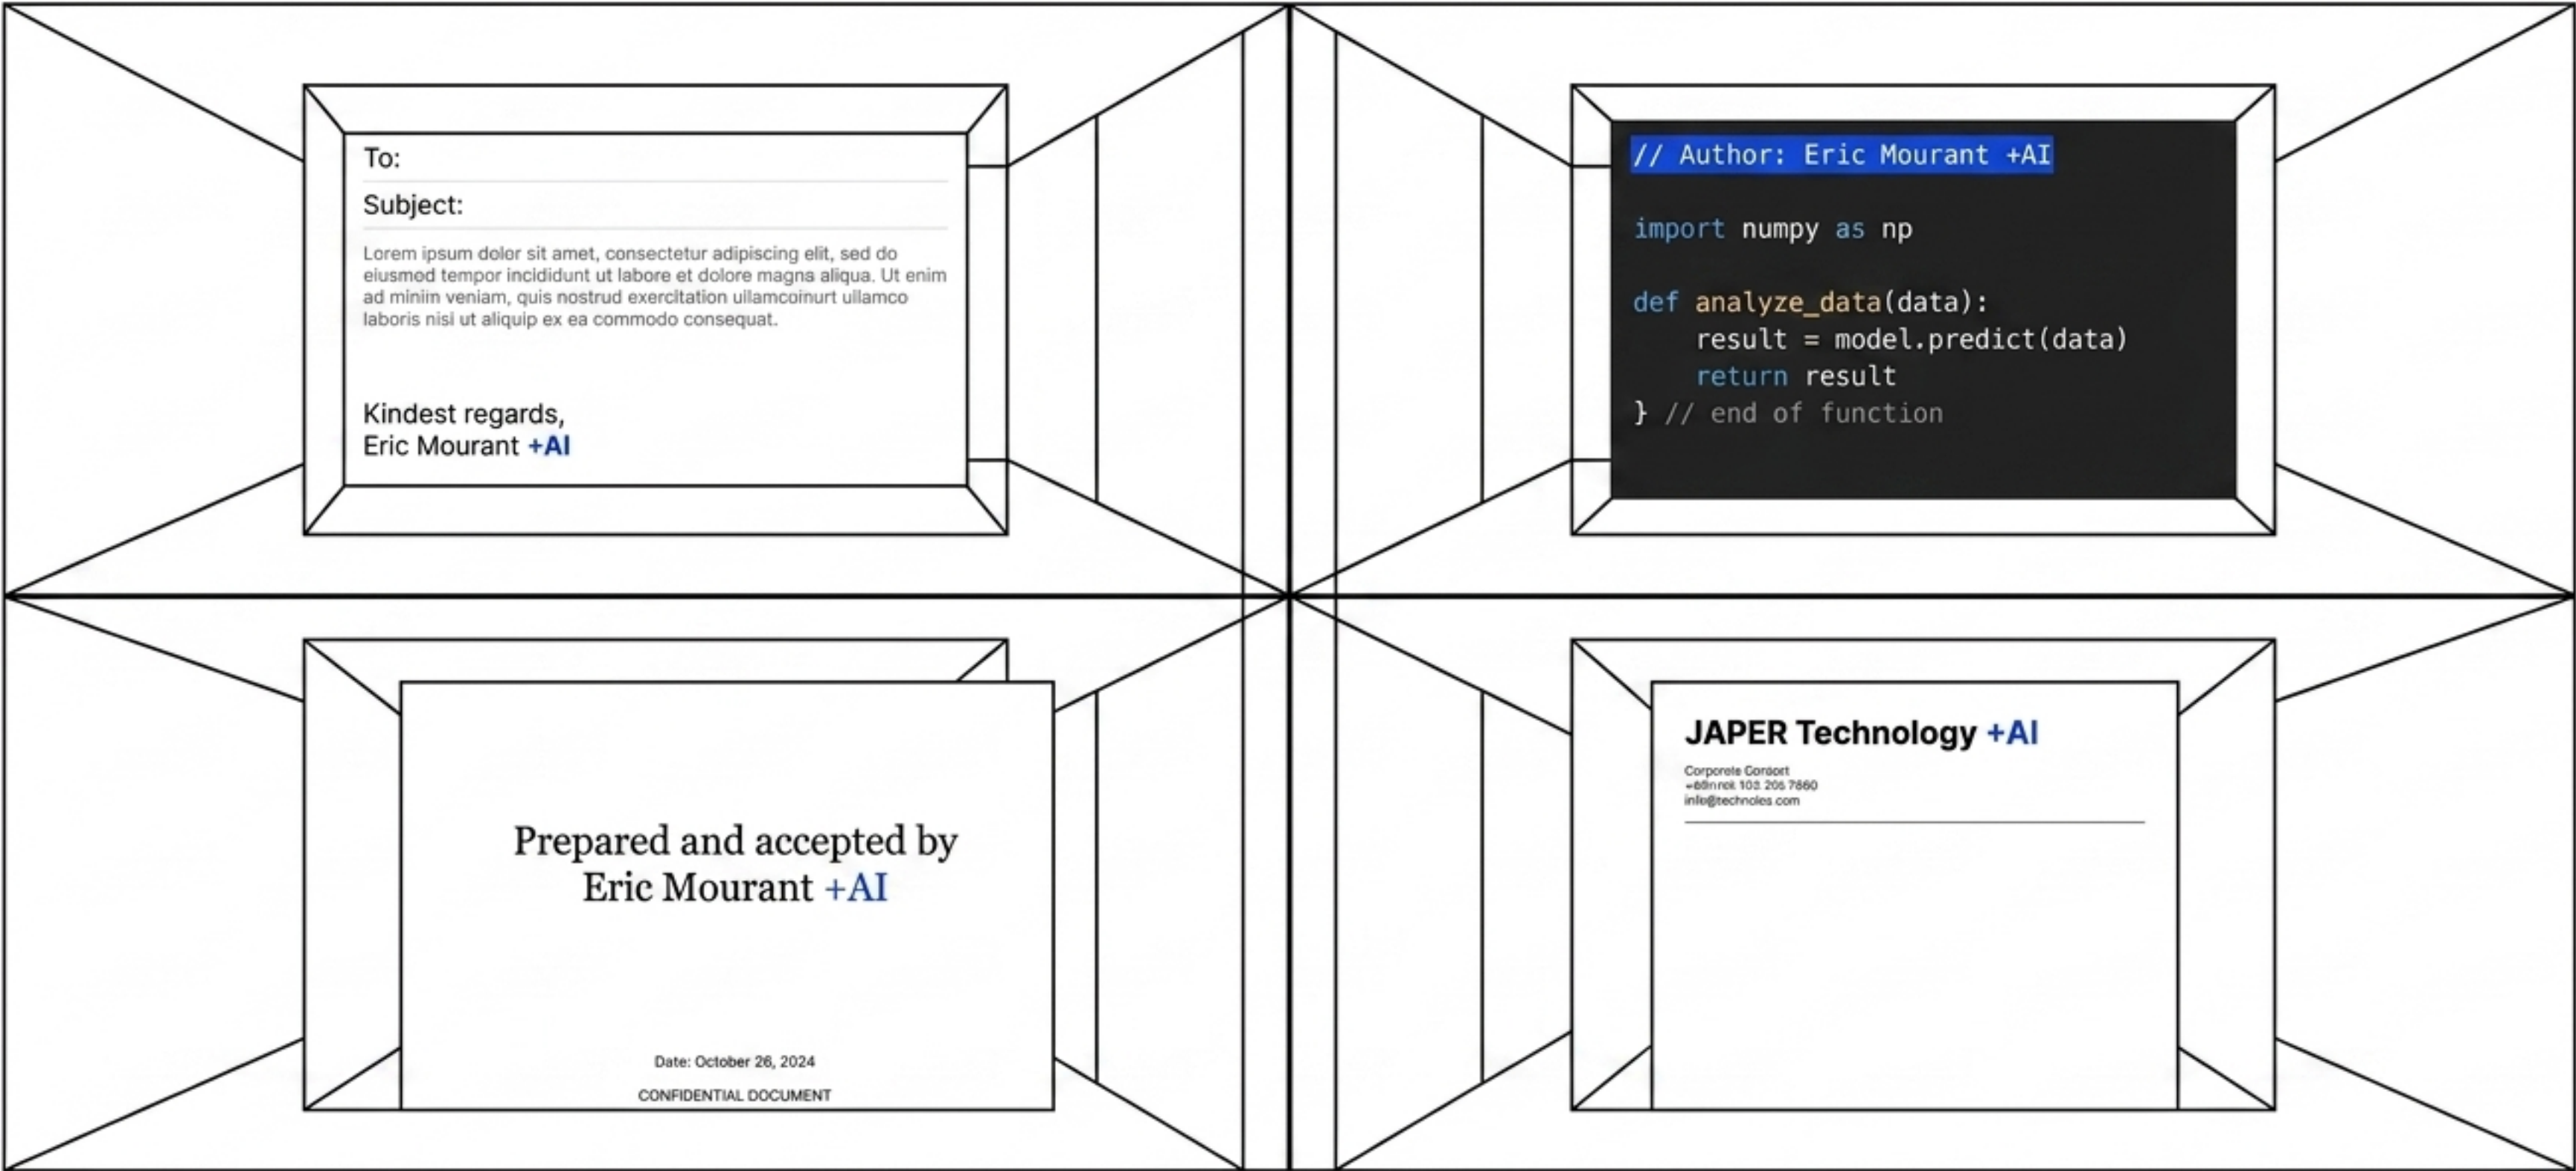

Responsibility $\neq$ Infallibility. It means you accept the consequences of the decision to release the work.

A situational declaration attached to an act,
not a permanent credential.

Traditional (e.g., Ph.D., CPA)	Looks backward.	Permanent identity.	Grants status, rank, or professional authority.	What have I earned?
The AI Age (+AI)	Looks forward.	Situational application (used on one artifact, omitted on another).	Declares provenance and accountability.	What am I taking responsibility for?

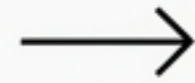

A symbol small enough to survive ordinary life,
powerful enough to span all mediums.

No gatekeeper. No registration.
No proprietary image file.
Typed on any keyboard.

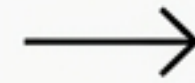

The visible post-nominal is just the human-facing surface.

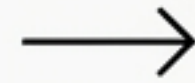

Symbol
(The typed string **+AI**)

Social
Convention
(Widely recognized
cultural shorthand)

Provenance
Protocol
(Machine-readable
headers attached
to files)

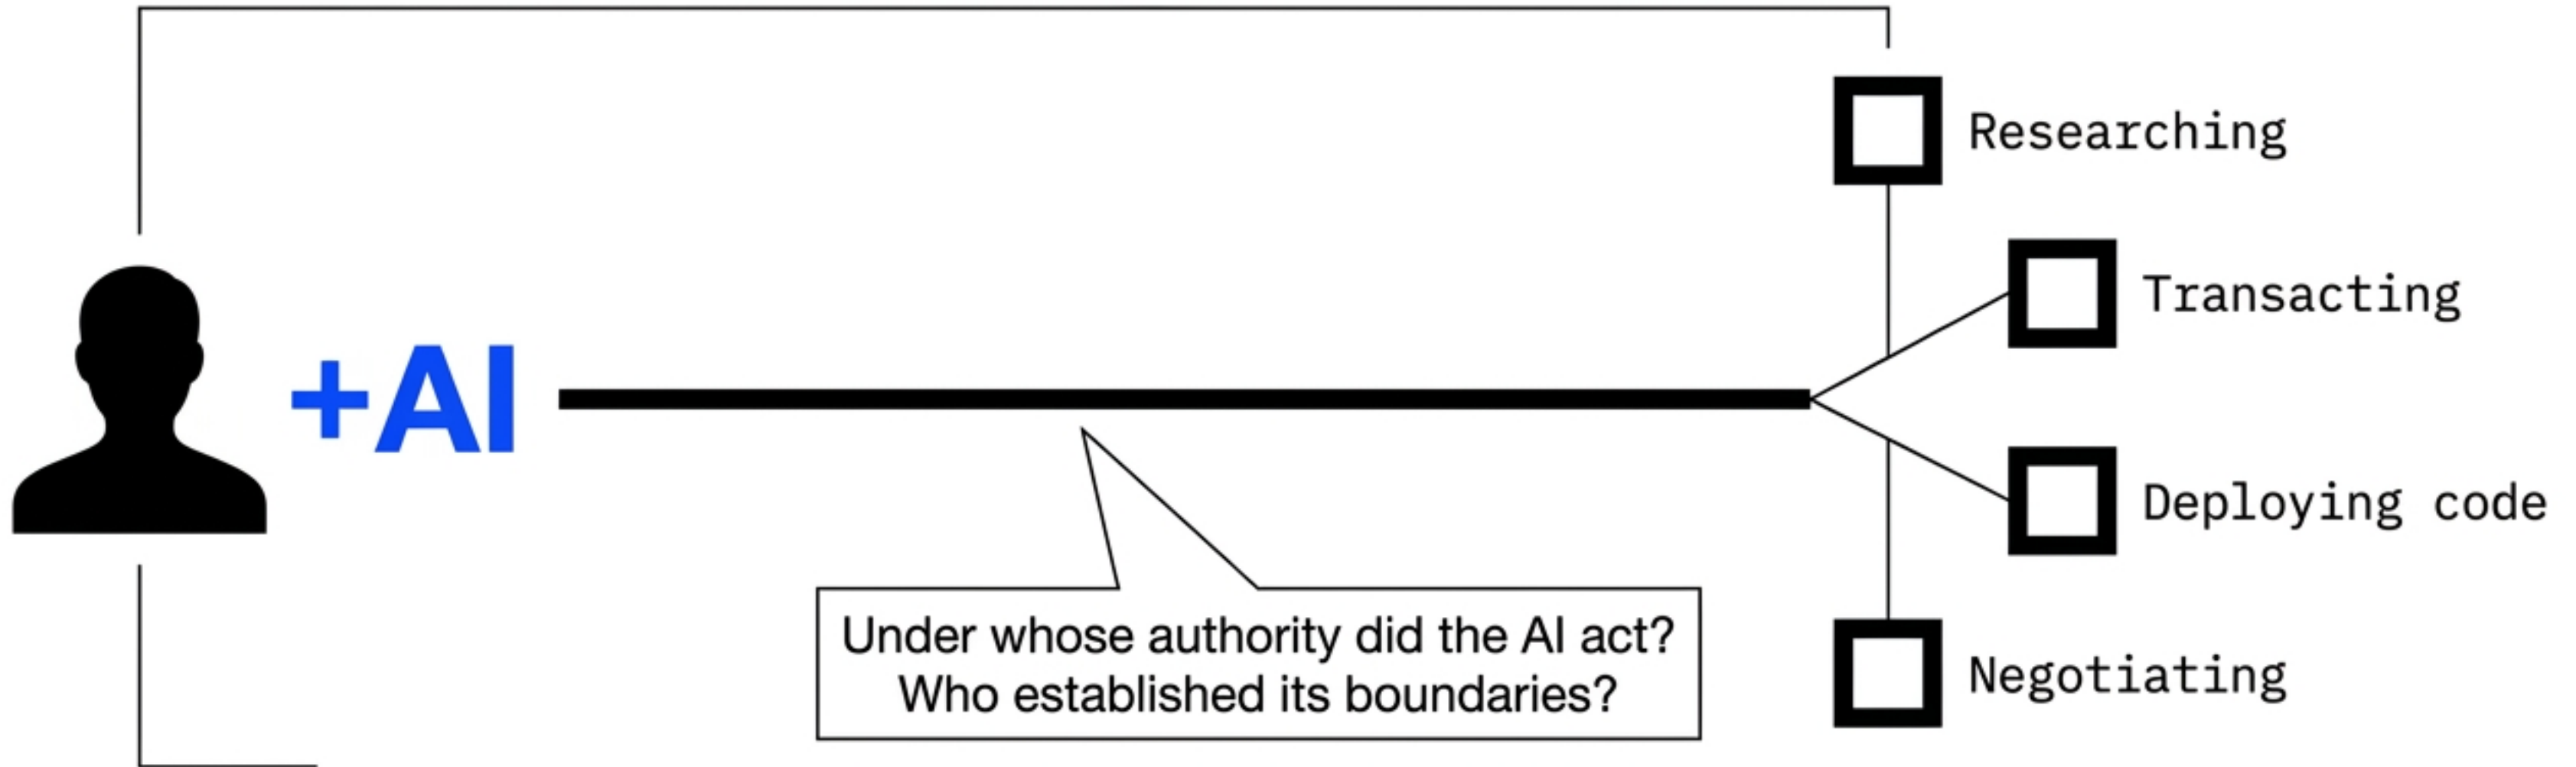

Accountability
Infrastructure
(Cryptographically
signed metadata)

```
{  
  Identity: 'Eric Mourant',  
  Date: '2024-10-24',  
  AI_Class: 'Assistance',  
  Model: 'GPT-4',  
  Full_Review: True,  
  Signed: True  
}
```

As AI moves from generating content to taking action, capability becomes distributed.

The Agentic Future

Capability is becoming distributed. Responsibility must not become diffuse.

Use AI openly. Keep responsibility human.

**Not an AI mark. A human mark.
You used the machine.
You own the result.**

Signed,

[Eric Mourant]+AI
